Swirsky Gold started her career as a political scientist, earning a Ph.D. in the subject from Stanford before questions about her daughter's pajamas led her down another path entirely: That of cancer research. Berkeley biochemist Bruce Ames, who is a senior scientist at Children's Hospital Oakland Research Institute, recalls that Swirsky Gold, a mother of two, grilled him about his research on the flame retardant TRIS used in children's sleepwear back in 1977—and he hired her on the spot. "I'm a very enthusiastic type and I like people around me who are very nitpicking, who dot every I and cross every T," Ames said. "And Lois was wonderful at that."

Ames and Swirsky Gold worked together closely in the decades that followed. Swirsky Gold served as director of the Berkeley lab's Carcinogenic Potency Database, a widely used resource that summarizes more than 6,000 animal cancer studies, many of which have been used to support what Swirsky Gold and Ames have argued are disproportionate concerns over the carcinogenic properties of pesticide residue on fruits and vegetables. In 2002, the pair published a book, *Misconceptions About the Causes of Cancer*.

Washington, D.C.-based Jenny Gold, 29, said her mother's "strident search for truth" inspired her to pursue a career in journalism. "She was really passionate, and when she saw something that she thought was wrong she would go at it at full force," Jenny Gold said. In every aspect of her life, says Swirsky Gold's life partner, Dr. Stuart Gold, "Lois was a powerhouse. That's all I can tell you."

Swirsky Gold is survived by daughters Alissa and Jenny Gold, partner Stuart Gold, and sister Sheila Swirsky Edell.
