The world of technology changed dramatically on December 9, 1968, when **Douglas Engelbart**, M.S. '52, Ph.D. '55, appeared at the Fall Joint Computer Conference in San Francisco to present his new invention: the computer mouse. Engelbart passed away on July 2 in Atherton at age 88, but he will always be remembered for the revolutionary ideas he introduced that made modern personal computers what they now are.

Engelbart, born in 1925 in Portland, Oregon, was drafted into the Navy during World War II. He spent two years in the Philippines as a radar technician,

where he first envisioned a new computer system after reading Vannevar Bush's essay, "As We May Think." Among other things, the essay posited the creation of a collective memory machine that would make knowledge more accessible.

His service over, Engelbart returned to his home state and completed a bachelor's degree in electrical engineering at Oregon State College in 1948. He was hired by the Ames Research Center, a government aerospace facility (now part of NASA). He then went to Berkeley for his Ph.D. in electrical engineering.

It was there, where some of the first digital computers were being developed, that Engelbart began to enlarge his radical ideas. He imagined sitting in front of a large computer screen full of symbols, or icons, while others were doing the same—by navigating the screen of icons, they could share their information and collaborate on

ways to solve problems.

"[Engelbart] introduced the world to a literally novel way of thinking about how computers could be used to augment human intellect, as he called it—but augment not just individual intellect but also organizational intellect," said Andries van Dam, a friend of Engelbart and professor of computer science at Brown University.

It was also at Berkeley that Engelbart envisioned using a tool outside the computer to operate the *inside* of the machine. Engelbart left his position as an assistant professor at the University and took a research position at Stanford Research Institute (SRI). There he worked on developing various advanced computer technologies, and in 1963 he invented the very first mouse. (He patented his mouse in 1970, but the product didn't become commercially available until 1984 when Apple released the first Macintosh.) The initial prototype was a pine block fitted with wheels on its underside, a wire sticking out from the end, and three buttons on top.

Five years later Engelbart gave what has become known as "The Mother of All Demos" before more than a thousand of the world's leading computer scientists. On stage with his cube-shaped mouse, a keyboard, and other controls, he projected the computer display on a huge video screen and demonstrated how to operate the interactive computing system he had envisioned.

"What he demoed was revolutionary at the time, and I would dare say that no one in the audience had seen anything like it, ever," said van Dam. "It was monumental.

Engelbart is survived by his wife, Karen O'Leary Engelbart; his son, Norman; daughters Diana, Christina, and Gerda; and nine grandchildren.

The life and career of **Harry "Chuck" Muncie** '75, former Cal running back and NFL All-Pro player who died at his home in Paris on May 13 at the age of 60, could easily be summed up with stats and superlatives.

During his time at Cal, the formidable 6' 3", 227 lb. Muncie broke six school records, including the most touchdowns scored in a single season. In 1975, he was runner-up for the coveted Heisman trophy; in that same year, he was the first Cal football player to grace the cover of *Sports Illustrated*. Muncie was the third pick by the New Orleans Saints in the 1976 NFL Draft. He participated in the Pro-Bowl three times, earning the Pro-Bowl MVP in 1979, and by the time he retired in 1985 ranked fourth overall in the league for his record 74 total touchdowns for both the Saints and the San Diego Chargers. "Chuck was one of the most gifted people I had ever been around," noted Mike White '58, head football coach at Cal from 1972 to 1977. "But he was tremendously misunderstood."

Underneath Muncie's towering talent, there were serious issues of poor practice habits and heavy drug abuse. In 1984, he was suspended from the NFL for cocaine addiction—a moment that would lead to Muncie's early retirement and, ultimately, a 17-month prison sentence for drug dealing. "His personality, being so kind and warm, was such that I could see how he might be taken advantage of by some people," remarked Ed White '68, Muncie's former Chargers teammate and fellow Cal alum. "But the best part of that situation is that the fall he took made him a much better person, helping young people move on."

Throughout the rest of his life, Muncie devoted himself to helping kids from underprivileged backgrounds. He worked with the Boys and Girls Clubs of America, ran a mentoring program for young athletes at Cal, and in 1997 created the Chuck Muncie Youth Foundation—an organization providing youth mentoring, job training, and tattoo removals.

"He had issues with drugs and he had issues that maybe stemmed from lack of confidence, but those close to him, and there were a lot of people close to him, saw this different side of him," said Mike White. "He enjoyed people and he enjoyed helping people. And he never kept score."

Muncie is survived by his daughter Danielle Ward, three grandchildren, and two sisters.

He then taught at Emma Willard School in Troy, New York where he was awarded an Andrew Mellon Foundation faculty grant to study at the Haarlem Summer Organ Academy in Haarlem, Holland and to do research in France. His performance career included dozens of organ concerts in the United States, including a keynote concert for the Columbia Bach Symposium in New York City, and in Europe where he performed in Spain, Germany, Switzerland, Sweden, Norway, and Austria. One of Walker's proudest accomplishments was taking Second Prize at the Hofhaimer Competition for the interpretation of classic organ masterpieces in Innsbruck, Austria.

**82 Richard Lee Klein**, March 23, in Virginia. He began his professional career in the early 1980s with the Army. After four years of service, he was honorably discharged as an Artillery Officer with the rank

of First Lieutenant. Richard officially joined the FBI in 1987. Over the next 25 plus years, his distinguished career included serving as a member of the SWAT team while holding various ranks of ascendancy in the Criminal Division. As a member of the government's Senior Executive Service, Richard continued to broaden the scope of his expertise in holding executive positions with the Bureau's Financial Management Division and, ultimately, the Counterterrorism Division. His accomplished career in the institution spanned decades and was marked by accolades for his steadfast service to his country.

**83 Gary Chee**, Nov. 16, in Bakersfield. He graduated with a degree in Electrical Engineering and Computer Science. He particularly had fond memories of living in Ridge House. Upon graduation, he took a job in Bakersfield with the California Department of Water Resources and began a career that spanned 29 years. He worked his way up from an electrical engineer to Supervising Hydroelectric Power Utility Engineer and chief of the engineering branch of DWR San Joaquin Field Division. He leaves behind his wife, Justina, and four children.

**91 Jay Reagan Uusitalo**, March 9. Jay, an avid pilot, learned to fly at a young age from his grandfather. He made everyone with whom he came into contact feel special. What was unique about Jay was that he truly valued the simple things in life, never taking a single moment for granted, always fortunate and thankful for the many blessings he received. The most important of these were his wife, Stephanie, and their two daughters.
